- Bond both flexible and rigid substrates
- Exhibits outstanding bond to porous, non-porous substrates encountered in automotive, railway, vehicle building, electrical areas of shipbuilding and many other industries

CYANOACRYLATE ADHESIVES

Fevikwik is unique in its speed and bond strength. It can be applied in wide range of industrial applications. It bonds almost anything to anything quickly and surely. It is based on cyanoacrylate monomer and polymerizes very quickly in presence of minute quantity of moisture on the surface of the material to be bonded.

APPLICATIONS: Quick bonding, Industrial assembly, PP and ABS in auto segment, Filter industries, general purpose bonding, EPDM rubber bonding, Elastomeric plastics bonding, Specialty metal surface bonding. For low surface energy substrates, Primer PP2 application provides better adhesion.
